GitHub: github.com/ayushyadav
Email: ayushrao9407@gmail.com
Mobile:+91-7015427476

Skills

- **Languages**: C, C++, Java, JavaScript, Python
- **Frontend:** HTML5, CSS3, Tailwind CSS, React.js
- **Backend:** Node.js, Express.js, PHP
- **Database:** MongoDB, MySQL
- **Tools & Platforms**: Git, GitHub, VS Code, Postman, XAMPP
- **Foundational Knowledge:** Data Structure & Algorithms, OOP, Operating Systems, DBMS
- **Soft Skills:** Problem-solving, Ownership, Leadership, Adaptability, Teamwork

Experience

Ram Mobiles — Freelance Software Developer | Live — Nov'25 – Dec'25

- Architected and deployed a production-grade full-stack e-commerce platform managing product catalog, order lifecycles, and inventory management, using a modular backend architecture and secure **RESTful APIs** with **JWT-based authentication**.
- Designed and implemented stock validation and inventory update logic during order processing, reducing incorrect order placements and supporting a live production system that generated ~₹6,000 in freelance revenue.
  Tech Stack: React.js, Tailwind CSS, Node.js, Express.js, MongoDB, JWT, REST APIs

Projects

Carpooling and Ride Sharing Website|GitHub — Feb'25 – May'25

- Developed a web-based ride-sharing platform enabling users to register, create ride offers, and search for available rides for efficient carpooling.
- Designed a responsive and user-friendly interface with dynamic ride management features using HTML, CSS, and JavaScript.
- Implemented backend functionality using PHP and SQL for secure user authentication, ride data storage, and booking management
- Improved user experience through optimized navigation and real-time ride availability updates; deployed the application live for public access.
  Tech Stack: HTML, JavaScript, CSS, PHP, SQL

Intelligent CPU Scheduler Simulator|GitHub — Nov'24 – Jan'25

- Developed an intelligent CPU scheduling simulator that optimizes process execution based on real-time parameters such as burst time, priority, and waiting time.
- Implemented adaptive logic to dynamically select the most efficient scheduling algorithm (FCFS, SJF, Priority, Round Robin) to minimize average waiting and turnaround time.
- Built the system using Python to simulate scheduling behaviour, compare algorithm performance, and improve CPU utilization and responsiveness.
  Tech Stack: Python,Streamlit.

Training

Cipher Schools (EdTech Company) — Full Stack Web Development (MERN) — Jun'25 – Jul'25

- Created a full-stack Online **Library Management System** enabling secure user access through JWT authentication, role-based permissions, and well-structured MongoDB–Mongoose models.
- Applied modular backend architecture and efficient React state management, achieving **approximately 30% reduction in redundant API calls** and improving maintainability and performance.
  Tech Stack: MongoDB, Express.js, React.js, Node.js, JWT, Mongoose

Certifications

- Full Stack Development– Cipher Schools | Link — Nov '25
- Cloud Computing – NPTEL |Link — Apr'25

Achievements

- Solved **500+ DSA problems**across arrays, trees, graphs, dynamic programming, and greedy algorithms. — Feb'26
- Achieved a peak LeetCode Contest rating of **1546**. — Dec'25
- Secured **Global Rank 2464** among 30,000+ participants in LeetCode Biweekly Contest 170. — Nov'25

Education

- **LovelyProfessionalUniversity** — Punjab,India
  *BachelorofTechnology-ComputerScienceandEngineering;**CGPA:8.05*** — Aug'23 - Present
- **Delhi Public International School** — Rewari, Haryana
  *Intermediate; **Percentage: 82.4%*** — Apr'22–Mar'23
- **RashtriyaSr.Sec. School** — Rewari, Haryana
  *Matriculation; **Percentage: 78.8%*** — Apr'20–Mar'21
